

Notice of Field Studies

For the NaiKun Offshore Wind Energy Project

Throughout 2008 and into 2009, environmental and engineering field studies are being undertaken as part of the environmental assessment of the proposed NaiKun Offshore Wind Energy Project and to evaluate the conditions of the project site area. The purpose of these studies is to develop an understanding of the environmental, social and economic aspects of the project and to ensure that the project design is informed by site conditions. The following field work is planned for September 2008:

Meteorological Station Maintenance | Beginning September 25, 2008, NaiKun will be undertaking regular maintenance of its marine meteorological station, which is located at the offshore project site in Hecate Strait. The marine meteorological station is equipped with several high-tech instruments that require regular maintenance. This work will be undertaken over a period of five days and will involve crews accessing the site by boat and by helicopter. The majority of the work will be staged from the Prince Rupert area, as well as Masset on Haida Gwaii.

Timing and nature of this field work is weather-dependent and therefore the schedule for this work is subject to change.

NaiKun is committed to notifying the public and local communities about the nature and timing of upcoming field studies near the vicinity of the project site. NaiKun's *Notices of Field Studies* will be posted on NaiKun's website at www.naikun.ca and in the Haida Gwaii Energy Centre.
